## The Petra Computing Approach

Web  
Design

### Return on Investment

*"We endeavor to analyze the returns for every customer's website such that each finished product pays for itself in the shortest possible time frame."*

Consulting

### Thoroughness of Implementation

*"We are determined that every customer's project will have the attention-to-detail that increases our customer's value in the marketplace."*

Custom  
Web  
Solutions

Managed  
Hosting

### Internet Efficiency

*"We deliver efficient and easily maintainable E-Business components that together increase our customer's overall productivity."*

## Complete Internet Solutions

### What our clients are saying about us:

*" I searched for a trail-breaking Internet Solutions company that not only wanted my business but truly wanted to help my company gain extra productivity, efficiency, and income from our website. Petra Computing stood tall above the rest. They built my company's website and taught all the tips and techniques to easily maintain it afterwards. I appreciate the way Petra Computing always made me feel like their most important client. Now that's not common among Internet Solutions companies."*

*Marty Appelbaum, President  
Appelbaum Training Institute*

### About Us:

*Our nationwide clientele come to us for sharp-looking web designs, as well as extremely functional hosted websites. The solutions we build save time and money, helping companies manage information flow by working effectively via the Web.*

*Our customers are from various industries - from startups to the fastest growing corporations in America. We've designed and implemented stand alone websites, and built onto existing software infrastructure. Either way, customers enjoy the fact that their websites are "self-maintaining." We always provide them the ability to make changes as they grow - without us. We call this technology ZUpdates™, and use it extensively in the websites we build. More details are available on this exciting new technology at [www.PetraComputing.com](http://www.PetraComputing.com)!*
